DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/13/2003 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 2 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 5,817,087 to Takabayashi, in view of U.S. Patents 6,458,116 to Matsushita. Takabayashi discloses applicant's basic inventive concept, a shorts type disposable diaper (FIG. 1, 1), comprising two liquid permeable waist sheets, back and top (10 and 30 combined), with two elastic members (11 and 21) located at the waist and along the opening for legs, respectively, substantially as claimed with the exception of specifying the strength of bonding zones to be in a range of 4 to about 40 N with respect to a 25 mm longitudinal dimension of said bonding zone and having the elastic members along the entire circumference of the waist, ending before they enter their respective bonding zones (per preamendment C). Matsushita shows the latter feature to be old in the disposable undergarment art (FIG. 1, element 8). It would have been obvious to

Art Unit: 3744

one having ordinary skill in the art at the time the invention was made to modify the disposable undergarment of Takabayashi in view of Matsushita, by not having the elastic member a part of the bonding in order to improve the efficiency of the product. Also, from the discussion in columns 5-8 of Takabayashi, one can assume that the selection of proper elastomer to be used can render the specs claimed by the applicant.

Allowable Subject Matter

4. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
